PROFILE

Second-year B.Tech Computer Science & Engineering student specializing in Data Science & Machine Learning, with a strong foundation in Python, data analysis, and applied machine learning. Experienced in developing data-driven projects involving natural language processing and healthcare analytics. Demonstrates analytical thinking, problem-solving ability, adaptability, and a commitment to continuous technical development.

SKILLS

Programming & Web Technologies: Python, HTML, CSS

Data Science & Machine Learning: Pandas, NumPy, Matplotlib, Seaborn, TensorFlow

Development & Version Control: Jupyter Notebook, VS Code, Git, GitHub

Professional Skills: Analytical Thinking, Problem Solving, Adaptability, Focus, Team Collaboration

PROJECTS

Hate Speech Detection | Python, Pandas, NumPy, Machine Learning — 1stopai Internship 2026

- Built a 3-class text classification pipeline on 24,783 labeled tweets (hate speech, offensive language, neutral) using NLTK-based cleaning, stopwords removal, and stemming.
- Vectorized cleaned text into ~25,700 features using CountVectorizer and trained a Decision Tree Classifier on an 67/33 train-test split.
- Achieved 87.7% classification accuracy on held-out test data, validated using confusion matrix analysis across all three classes.

GitHub: <https://github.com/tarun06dev/hate-speech-detection>

Predicting Mortality of Heart Failure | Python, TensorFlow, Scikit-learn — 1stopai Internship 2026

- Built and compared two mortality-prediction models (SVM and a 4-layer neural network) on 299 patient records across 12 clinical features.
- Conducted EDA using correlation heatmaps and swarm/boxen plots to identify key risk indicators, including ejection fraction, serum creatinine, and age.
- Improved the neural network (TensorFlow/Keras, with dropout and early stopping) to 81% accuracy, raising recall on at-risk patients to 82% versus 57% for the SVM baseline — reducing missed high-risk cases.

GitHub: <https://github.com/tarun06dev/predicting-mortality-of-heart-failure>

EXPERIENCE

Data Science Intern — 1stopai 01 Jun 2026 – 31 Jul 2026

- Completed a structured, project-based Data Science internship, delivering two end-to-end ML projects — a hate speech text classifier and a heart-failure mortality predictor — under professional mentorship.
- Owned the full pipeline for both projects: data cleaning and preprocessing, exploratory analysis, model building, and performance evaluation against baseline models.

CERTIFICATIONS

CS205: Building with Artificial Intelligence | Saylor Academy | 48 Hours | Grade: 90.20% Jan 2026

Data Science | Kshitij, IIT Kharagpur / 1stopai | Certificate of Participation Jun–Jul 2026

Data Science Internship | 1stopai Jun–Jul 2026

EDUCATION

Lovely Professional University Phagwara, Punjab

Bachelor of Technology (B.Tech)

Computer Science & Engineering — Specialization: Data Science & Machine Learning

2nd Year | 3rd Semester | CGPA: 8.02

Shemrock Sr. Secondary School Mohali

Class 12 | Percentage: 75.8%

APS Amritsar Amritsar

Class 10 | Percentage: 95.6%
